

# TSP Custom API Integrations

## Placing data at your fingertips...

Of all the technology services we offer, systems integrations yield the greatest efficiency gains. With the power of API integration technology, we can help you increase sales and drive down costs in the following ways:

- **Link Multiple Systems** – API integrations allow organizations to run their operational workflows from a central system thereby maximizing efficiencies and minimizing costly errors.
- **Incorporate External Data** – API integrations allow data from external sources to be utilized for process automation, rules-based decisioning and accurate and precise financial planning.
- **Expand System Functionality** – API integrations enhances end-user experience, maximizes borrower engagement and increases sales.

The following are some of the integration work we have undertaken in recent years:
